With apologies to the Beach Boys...

Beyond the necessary movement of the drivers in the loudspeakers, there really are no Good Vibrations in a listening room.

Mechanical vibrations; caused by the movement of objects in the environment and the audio components themselves, and air-borne vibrations; particularly those within the audible spectrum, all conspire to reduce musical clarity.

The engineering and manufacturing craftsmen at HRS have created a series of carefully constructed isolation and resonance control products that significantly reduce those vibrations.

The SXR series of audio stands is the newest addition to their product line. It is uncommonly expandable and reconfigurable with an exceptional level of performance and build quality. This is all achieved at a price below that of their acclaimed reference level MXR Audio Stands from which many key features of the SXR were derived.

781-893-9000 • 899 Main Street • Waltham, MA 02451

As always, no hurry, no pressure.
